Troubleshooting tips. Make sure the thermostat is set properly. Sometimes fixing your air conditioner is as simple as learning to set the thermostat properly. If set incorrectly, your air conditioner may not work the way you want it to. You might have your thermostat set to heat instead of air conditioning.

Ptac Repair Guide - ravirostore.com

Most central air conditioners are connected to a home's forced-air distribution system. Thus, the same motor, blower, and ductwork used for heating are used to distribute cool air from the air conditioning system. When a central air conditioner is operating, hot air inside the house flows to the furnace through the return-air duct.

Packaged Terminal Air Conditioner/Heat Pump

If the Air Conditioner Does Not Dehumidify Air (Oversized System) Possible Causes . Failure to properly remove humidity can be caused by an air-conditioning system that is too large for the house.If your system has always failed to dehumidify adequately, and it commonly short-cycles (turns on and off frequently), an oversized system is a likely cause.

Air Conditioner Repair Tips & Guide - Apps on Google Play

The flap may have been touched during operation. Operate the air conditioner, and then turned it off. The flap will close properly. In the event the air conditioner stops operating due to a power outage, causing the flap to remain open, the flap may not close completely when the power supply resumes. In such a case, operate the air conditioner.

Air Conditioner & Heat Pump Diagnose & Repair Guide

Run through these air conditioner troubleshooting steps before you call your air conditioner repair technician:. Check your thermostat's settings. The thermostat should be set to cooling model, and the temperature set a few degrees lower than the home's current temperature to initiate a cooling cycle.
