S Test Driven Development By

Test Driven

Development (TDD) is software development approach in which test cases are developed to specify and validate what the code will do.

In simple terms, test cases for each functionality are created and tested first and if the test fails then the new code is written in order to pass

follow it truly write better code. But it's not enough on its own to deliver bug-free software. You'll need to add more skills to your testing tool belt to deliver the best software that you can. That's where a tool like Prefix comes in. Prefix works best in test-driven teams. It runs on your local machine, and works like a web-request profiler.

PDF S Test Driven

development (or TDD) seeks to keep coding, testing and design very closely related by writing a test before actually writing any of the app's code. Unit tests are designed, developed and run before starting work on each web or mobile app functionality with the aim to make the code simpler, clearer and bug-free.
