Solving Single-Step Equations. Learning Outcome. Use the addition, subtraction, multiplication, and division properties to solve single-step equations; We will begin solving equations below, but first we need to understand what a solution to an equation looks like. The purpose in solving an equation is to find the value or

Access Free Solving Single Step Equations (Single Step) - Worksheets

That's why solving multi-step equations are more involved than one-step and two-step equations because they require more steps. The main goal in solving multi-step equations, just like in one-step and two-step equations, is to isolate the unknown variable on one side of the equation while keeping the constant or number

Multi-step equations are all equations that require you to perform more than two steps (or operations) in order to solve them. They can be simple or really hard to do, since there are no limitations on the number of steps you have to perform to get to a solution.

Multi-step equations - Free Math Worksheets

Since the variable is multiplied by -5, to isolate the variable, you must divide each side by -5. Remember that dividing... $-5x = 45$ $\{\displaystyle -5x=45\}$ $-5x - 5 = 45 - 5$ $\{\displaystyle \frac{-5x}{-5} = \frac{45}{-5}\}$ $x = -9$ $\{\displaystyle x=-9\}$ Checking your
