EP, Klijn JG, Reubi JC.
Somatostatin is a
regulatory hormone or
tissue factor which
plays an inhibitory role
in the normal
regulation of several
organ systems,
including the central
nervous system,
hypothalamus and
pituitary gland, the
gastrointestinal tract
and the exocrine and
endocrine pancreas.

Somatostatin (SST) is a hormone that is involved in many cell processes and directly and indirectly inhibits cAMP production in various tissues, including liver and kidney. SST analogues therefore have a potential role in the treatment of ADPKD for the renal as well as the hepatic phenotype.
