of 1883 is considered the loudest sound ever. On the morning of Aug. 26, 1883, the residents of the island of Krakatoa in the Sunda Strait of Indonesia, then-Dutch East Indie, arose like it was any other day. They went about their business as smoke trailed from the three volcanic cones that dotted the island.

Two-thirds of the original Krakatoa Island was obliterated by the 1883 eruption. While seismic activity around the volcano was intense in the years preceding the cataclysmic 1883 eruption, a series of lesser eruptions began on 20 May 1883. The volcano released huge plumes of steam and ash lasting until late August.

Britannica

On an early May morning in 1883, the captain of the German warship Elisabeth spotted a cloud of ash and dust rising above the uninhabited island of Krakatau. Little did the captain know that his documentation of this ominous cloud would be one of the first recorded volcanic eruptions from this Indonesian island in at least two centuries.
