Calcium is the most important mineral for bone health. However, there are other minerals that play an important role as well. The good news is that a balanced diet provides adequate nutrients for most people—without the need for expensive supplementation. Here's a snapshot of some mineral super-stars and links to further information about each one. [...]

Journal of Bone and Mineral Research: Vol 33, No 8

Phosphorus is one of the most abundant minerals in the body and is a major structural component of bone, where 85% of the body's phosphorus can be found. Phosphorus also helps to maintain normal acid-base balance (pH) by acting as one of the body's most important buffers and helps filter out waste in the kidneys.
