Fixations in the early phases of adolescence give rise to deviant developments which the two case studies of this volume richly illustrate. Susan and Ben were both successfully treated, and these insightful analyses of their treatment form a major contribution to psychoanalytic theory and practice.

Researchers interested in adolescents can only do their research if teenagers and young adults are interested in participating in their studies. All studies at Cincinnati Children's go through a careful review from a committee called the Institutional Review Board (IRB), part of the Office of Research Compliance and Regulatory Affairs (ORCRA). This committee makes sure each study is safe for children, adolescents, and young adults to join.

An important program goal is to increase the opportunities for participation in the clinical trials process, as currently less than two percent of patients between the ages 15-30 are actively involved in clinical trials. The support of the Fowlers and prioritization by the Case Comprehensive Cancer Center of studies focused on cancers occurring in the 15-to-30 age range marks the first creation of an AYA-dedicated center within an NCI-designated Comprehensive Cancer Center.
