Travis CI Vs Gitlab Ci

Travis CI is a hosted, distributed continuous integration service used to build and test software projects hosted at GitHub. Travis CI also offers a self-hosted version called Travis CI Enterprise which requires either a GitHub Enterprise installation or account on GitHub.com. In contrast, GitLab.com and GitLab self-hosted versions offer both source code management, issue tracking, continuous integration, and many more DevOps tool chain requirements in a single application, while still also ...

Travis CI vs. GitLab | GitLab

GitLab CI is ranked 4th while Travis is ranked 5th. The most important reason people chose GitLab CI is: All of GitLab CI's code is open source and under the MIT license.

Travis vs GitLab CI detailed comparison as of 2020 - Slant

As far as I understand, the main difference is that gitlab-ci is opensource (you can install it on your own server) and travis-ci isn't. So then the latter is always cloud/service-based. And it's free for open source projects. But then GitLab.com (the company, not the software) also has a cloud version that you don't need to install: ci.gitlab.com.

How do travis-ci and gitlab-ci compare? - Stack Overflow

Travis CI is a hosted, distributed continuous integration service used to build and test software projects hosted at GitHub. Travis CI also offers a self-hosted version called Travis CI Enterprise which requires either a GitHub Enterprise installation or account on GitHub.com. In contrast, GitLab.com and GitLab self-hosted versions offer both source code management, issue tracking, continuous integration, and many more DevOps tool chain requirements in a single application, while still also ...
