The Velocity User Guide is intended to help page designers and content providers get acquainted with Velocity and the syntax of its simple yet powerful scripting language, the Velocity Template Language (VTL).

Apache Velocity Documentation

Velocity is a processing engine that is fed a context, which contains name-value pairs of variable names and Java objects, and a template that usually contains HTML or XML interspersed with Velocity markup. The context is merged with the template to create output, which is then displayed to the end user or written to a file.

Templates and Velocity | Introduction

It enables you to use the Velocity Template Language (VTL) scripts to insert a variable in a condition instead of a literal value to populate a string field. Velocity expressions usually begin with the \$ sign followed by the field name in camel case:
