Read the background in order to answer the Pre-Lab Questions that follow) The genus *Paramecium* includes several species of one-celled protists that live in freshwater. When there is enough food, water, and space, populations of these species grow rapidly and follow a pattern known as exponential growth, in which the total number of

the individual organism, the population is a real and functional unit in biology. Defined as groups of organisms that are genetically and spatially distinct from other such groups, the population is the fundamental unit of evolution.

Populations are dynamic, they grow, decline, colonize new populations, and go extinct.
