simulated—for example by quantum computer simulation—to a degree indistinguishable from "true" reality. It could contain conscious minds that may or may not know that they live inside a simulation. This is quite different from the current, technologically achievable concept of virtual reality.

Simulated reality - Wikipedia

One option for "world simulation" is to merely allow several explicit cases of behavior to be executed under specific conditions. For example, in an architectural walk-through, the system may prevent users from walking through walls, and constrain users' vertical movement to be as if they were walking on the floor surfaces.
