Writing Compilers and Interpreters (□□)

To convert source code into machine code, we use either a compiler or an interpreter. Both compilers and interpreters are used to convert a program written in a high-level language into machine code understood by computers. However, there are differences between how an interpreter and a compiler works.

Interpreter Vs Compiler : Differences Between Interpreter

...

In contrast with a compiler, an interpreter is a program which imitates the execution of programs written in a source language. Another difference between Compiler and interpreter is that Compiler converts the whole program in one go on the other hand Interpreter converts the program by taking a single line at a time.
